

PRESS RELEASE

Warning for kite flying

The Hellenic Electricity Distribution Network Operator (HEDNO) advises you not to fly your kite near power lines as you run the risk of an electric shock while there is the possibility of a blackout in the nearby area.

If your kite gets tangled in the lines, for your safety:

1. do not try to untangle it by pulling the string or by using other objects, even wooden ones;
2. do not try to climb power distribution or electric lighting frames or poles, not even at locations near power lines.

If you need help:

3. inform HEDNO's failure center or
4. contact the Police Station of the area

HEDNO will have an increased number of crews available at all of its Services all over the country for the fast repair of any failure caused by kite flying.
