

Clarification on the certificate of connection to public utility networks

- The submission of this verification is obligatory for the initial connection to the electricity distribution network of any building/space/facility, in accordance with Article 47A, para 1 of Law 4495/2017, as supplemented with Article 62 of L. 4759/2020.
- Each verification of connection corresponds to one supply, which means that applicants must submit the same number of connection verifications and requested supplies.
- The period of validity of the connection verification is six (6) months and shall be effective not only during the application but also for the activation of the connection. If the connection verification expires, a new connection verification must be issued and submitted.
- For initial connection applications regarding temporary supplies, the date of expiration of electricity supply shall be the date displayed on the "Service Details" of the connection verification.
- If any modification on the connection verification is required following HENDO's control, applicants must submit the corrected connection verification/ According to the Technical Chamber of Greece, this procedure is carried out through the e-Licenses, within the period of validity of the connection verification and free of charges.
- Regarding construction site supplies for which a connection verification is provided with an indefinite period displayed in the "Service Details" field (due to the fact that the building permit is valid indefinitely), these shall have a duration of two (2) years from the date of issue of the connection verification and in this case the modification of the connection verification is not obligatory.
- For cases of temporary supplies which are to be made permanent (e.g. construction site supplies), a verification of

connection with the utility networks shall be provided for a final connection.

- For supply construction applications, it is not obligatory to provide connection verifications at this stage, given that there already is a construction site supply.
