

## ANNOUNCEMENT

### **Announcement on the progress of restoration works at the Electricity Distribution Network in areas that were afflicted by the fires**

We continue updating the public on the progress of the restoration works carried out by HEDNO in the areas that were recently afflicted by the fires and today, **Friday, 13 August 2021**, we are announcing the following:

According to the data released by the HEDNO Central Greece Region Department, in **Northern Evoia**, and particularly in the **Municipality of Istiaia-Aidipsos, almost 100% of the residents have been reconnected to electricity**. Reconnection has been achieved either to the network or through power generators. However, works for the reconnection of individual customers are still ongoing. Similarly, in the **Municipality of Limni-Mantoudi-Agia Anna, reconnection has been achieved at almost 98%**, also either through connection to the network or power generators. Restoration works for the reconnection of individual customers and 3 small villages are still in progress. At the same time, HEDNO, in coordination with the Evoia Regional Unit and the respective Municipalities, has successfully dealt with the reconnection to electricity of all major facilities and pump stations.

According to the data released by the Peloponnese-Epirus Region Department, in **Archaia Olympia, 100% of the customers have been reconnected to electricity**. In **Eastern Mani**, the villages of Karvela, Marathea and Agios Vasilis have already been reconnected to electricity, while works are still continuing for the restoration of the Medium and Low Voltage network. Moreover, power generators are being transported which along with the restoration of the low voltage network, will result in the reconnection to electricity of the villages of Krini, Myrsini and Konakia until this evening. **In the area of Gortynia**, hard efforts are made through targeted partial restoration works for the network and the transportation of power generators to ensure reconnection until tomorrow evening for the largest part of the villages of Chora, Neochori, Livadaki, Chrysochori, Iamatikes Piges, Loutra, Litharos, Agioneri, Ochthia, Pyrris, Agios Ioannis Archaia Iraia, Lotis, Liodora and Kastraki, which still remain disconnected.

Finally, according to the data released by the **Attica Region Department** of HEDNO, in the areas that were afflicted by the fires, **reconnection has been successful for over 99% of the accounts**.

However, we have scheduled the installation of power generators for individual accounts and consumers for which immediate reconnection to the network is still not possible.

Please note that HEDNO's technical crews are working hard and non-stop with all their forces at all afflicted areas in order to ensure that all damages are restored and all consumers are fully reconnected to electricity.
