

PRESS RELEASE

Gradual restoration of power supply in the afflicted areas

HEDNO announces that today, Thursday, 26 July 2018, the restoration works to the Network in the areas afflicted by the deadly forest fires in East Attica continue at intensive paces.

Up to now, about 2,700 out of the total of 7,500 supply facilities affected by the extensive damaged caused by the forest fire to the Network in the areas of Mati, Neos Voutzas and Rafina, have been restored and 20 substations out of a total of 50 that were destroyed have been replaced and started operating.

The Company has activated from the very first moment that the forest fires broke out all internal procedures for crisis and emergency management, having all its crews stand-by and at the same time ensuring that all required materials and equipment are available.

Approximately 200 people, assisted by a big number of vehicles and machinery from other regions of Greece, make an effort for the soonest possible restoration of power supply in East Attica.

HEDNO shall continue its efforts to restore the Network non-stop, informing the public about the progress of the works up to full restoration of electricity supply for all consumers, extending once again its condolences to the families of the victims.
