

PRESS RELEASE

HEDNO excels at innovation and research in Greece and across Europe

According to EDSO, the association of European distribution system operators, out of all Electricity Distribution Network Operators, HEDNO is the company that was most involved with the EU Programme Horizon 2020 in the area of energy.

HEDNO excels at innovation and research in Greece and across Europe. As shown in recent report issued by the National Documentation Center including results for the involvement of Greece with EU Programme Horizon 2020 in the area of energy, for the period 2014-2016, HEDNO was at the top of the public interest companies list, based on its active involvement.

HEDNO is participating in the following six innovative projects:

TILOS (Technology Innovation for the Local Scale Optimum Integration of Battery Energy Storage), SmartEMC2 (Empowering SG Market ACTors through Information & Communication Technologies), WiseGrid (Wide scale demonstration of Integrated Solutions and business models for European smartGRID), Shar-Q (Storage capacity over virtual neighbourhoods of energy ecosystems), GRIDSOL (smart renewable hubs for flexible generation: Solar grid stability) and ERIGRID (European Research Infrastructure supporting Smart Grid Systems Technology Development, Validation and Roll Out).

HEDNO's active involvement in these projects is part of a wider business plan to gain first-hand know-how and implement its upgrading programme with greater efficiency and better use of up-to-date technologies.
