

Press Release

Electric vehicle (EV) charging stations must be registered

To ensure quality for all services, HEDNO requires that all EV charging stations are declared by their owners at <https://deddie.gr/el/upiresies/sundesime-to-diktuo/egkatastasi-ypodomonepanafortisis-ilektrokiniton-oximaton>, or via the app <https://apps.deddie.gr/ElectricMobility/>. For more information, please contact our customer support at 800 400 4000.

The increasing number of Electric Vehicles in our country is leading to a substantial increase in power demand that has to be accommodated by the electricity system, with the Distribution Network operated by HEDNO playing a pivotal role in supporting this growth.

In this context, it is necessary to register all EV charging stations (as mandated by Law 4710/2020) to guarantee transparent and equal access to the Network for all EV users, high safety standards and uninterrupted services.

Please note that the Distribution Network has the capacity to accommodate the EV charging stations, aligning with the objectives outlined in the existing National Energy and Climate Plan for 2030, as well as the more ambitious goals proposed in the forthcoming National Plan for e-Mobility.
